

NEXT GIS Office

NEXT GIS Office (graphic information system) expands the possibilities of using a classic map. In addition to the visualization of numerous geographic data formats, the NEXT GIS Office module handles the linking of data from the NEXT Schlagkartei Office with the graphic field parts and this forms the basis for income mapping.

Advantages at one glance

- ◆ graphic field parcels management
- ◆ graphical cultivation plan and evaluation
- ◆ measuring surfaces and distances
- ◆ construct, plan and edit GIS-objects
- ◆ extensive printing routines and presentation options
- ◆ free level management
- ◆ deposit of background maps
- ◆ Import and export of various data formats
- ◆ import of field blocks and landscape elements
- ◆ connection to mobile GPS-surveying equipment

Import and export of various data formats

- ◆ vector and grid based data formats
- ◆ import of field blocks and landscape elements
- ◆ import and export of many formats with coordinate transformation (Shape, Google Earth KML u.a.)
- ◆ connection to mobile GPS-surveying equipment

NEW

Advanced function

- + „die Hand“
- + UTM coordinates convert request
- + level management
- + application blocking zones
