

# ZMS Futter

---

The program Futter-R is used to calculate the rations for dairy cows, breeding cattle and beef cattle. It provides the user with the ability to calculate, change and manage rations with little manual effort. Based on the DLG guidelines, the integrated ration evaluation provides information on the coverage of important indicators, such as the intake of dry matter. Another function is the control of the feed mixer wagon as well as the daily evaluation of the amount of feed added to the groups.

## Advantages at one glance

- ◆ simple and user-friendly control
- ◆ usage of various feeding value tables (DLG, LKV Sachsen, Gruber feeding value table, LMS Schwerin, consulting tables)
- ◆ Assessment of the ration in terms of physiological efficacy and economy
- ◆ documentation of the total- or part mixed ration
- ◆ three parts feeding with basic, compensatory and performance feed
- ◆ digital reading of feed tests from the laboratory
- ◆ feed mixer wagon (for example Dinamica, MOBA, PTM)
- ◆ Data exchange with the herd management program HERDE to the performance group classification
