

# ITB Controlling

Developed for analytical work in the context of veterinary care, ITB controlling mainly supports the veterinarian's prophylactic work in reproductive and health analysis as well as feeding control.

## Advantages at one glance

- ♦ early detection of abnormalities, weak spots, feeding-, holding- and management mistakes
- ♦ determination of a company's optima (voluntary waiting time, optimal insemination period)
- ♦ procedural and effectiveness control measures, biotechnological processes and treatment strategies
- ♦ combination of diagnostics and treatment with performance data
- ♦ the cause of the short economic life and life effectiveness
- ♦ Veterinary economics and lost income versus veterinary costs
