

ITB Klaue

KLAUE is a software solution for veterinarians to increase the efficiency of detecting and evaluating hoof health. The recording takes place directly at the hoof stand under stable conditions with minimal effort. With a touch-screen pc, all entries can be made directly by finger pressure, even with gloves. Multiprogram data synchronization supports companies with multiple caregivers in multiple locations.

Proof of work and delivery note can be obtained directly on site. In addition, replay lists are automatically created for the next visit. The evaluation of claw health gives the advantage of software-supported documentation.

The documentation includes the automatically created AuA-list.

The image shows a product brochure for 'ITB Klaue'. At the top left is the logo for 'dsp agro soft', with 'dsp' in red and 'agro soft' in green. To the right of the logo is the text 'software solutions for farmers'. The main visual is a photograph of a brown and white cow in a green field, with a computer monitor in the foreground. The monitor displays a software interface with a list of data and a bar chart with red bars. Below the photograph is a small circular icon of a cow. At the bottom left of the brochure, the text 'Agriculture with a system.' is written. At the bottom center, the website 'dsp-agrosoft.de' is listed.
